

ĐÌNH TUẤN KIẾT

Intern Penetration Tester

tuankiet121305@gmail.com | 0866384257 | Dương Đức Hiền, Tây Thạnh, TP HCM
<https://github.com/TuKi-dtk12>

SUMMARY

Offensive Security enthusiast and Information Security student with a solid background in networking and systems programming. Adept at researching modern attack vectors. Seeking a Penetration Testing Internship to leverage manual exploitation skills in securing enterprise web applications and systems.

PROJECT

Causal-TGE: Lightweight Counterfactual Attack Reconstruction | Under Review Jun 2026 - Jul 2026

- System-level Telemetry: Modeled enterprise-level temporal provenance graphs from host telemetry (process executions, socket connections, file I/O) to detect stealthy APT campaigns.
- Attack Reconstruction: Engineered a counterfactual reconstruction engine to isolate and rank critical causal triggers within complex attack kill chains.
- Systems Engineering: Optimized a lightweight detection framework (~46 KB footprint, sub-millisecond latency) designed for strict resource-constrained endpoint environments.

Tuki Fresh Flower - Secure E-commerce Platform Apr 2026 - May 2026

- Secure Architecture: Engineered a Laravel MVC backend with API integrations (VietQR, Gemini) and enforced Database Transactions to guarantee absolute data integrity during checkout.
- Vulnerability Mitigation: Hardened application against OWASP threats by implementing Middleware RBAC, strict PDO (anti-SQLi), and a secure file upload pipeline (MIME validation, UUID renaming) to neutralize Web Shells and Path Traversal.

VocabMaster - Local AI English Learning Platform Feb 2026 - Mar 2026

- Built a Django backend for vocabulary and quiz management.
- Integrated a local Ollama API for offline AI-powered grammar checking and vocabulary generation.
- Fine-tuned a Qwen2.5-3B model using LoRA & Unsloth on a custom 10,000-sample dataset to enforce strict JSON outputs.

Vulnerable Web Application - Educational CTF Challenge Platform Dec 2025 - Jan 2026

- Development: Built a PHP/MySQL CTF platform with an RBAC dashboard and automated scoring, replicating 5 OWASP Top 10 vulnerabilities (SQLi, XSS, File Upload, CSRF, Command Injection)..
- Security Testing: Executed white-box code reviews and manual penetration testing via Burp Suite to validate and exploit vulnerabilities

Web Application Penetration Testing & CTF Practice Jul 2025 - Present

- Completed 100+ labs on PortSwigger and honed practical skills on Tryhackme, Rootme, PicoCTF.
- Conducted manual testing to exploit and mitigate OWASP Top 10 vulnerabilities.
- Published detailed HackMD write-ups on vulnerability exploitations

EDUCATION

Ho Chi Minh City University of Industry and Trade 2023 - 2027

- Major: Information Security
- Current GPA: 3.59/4.0
- Outstanding Academic Scholarship (2026), Merit Academic Scholarship (2024)

AWARD

Honorable Mention | Expanded Information Security Talent Search Competition Apr 2026 Thu Dau Mot University

KEY SKILLS

- Programming: Python, PHP, Javascript
- Tools: Burp Suite, Nmap, Wireshark, Nessus, SQLmap, Metasploit, etc
- Networking: TCP/IP, OSI Model, DNS, DHCP, HTTP/S
